Devon in Sight Eye Health & Sight Loss Fact Sheet 9

Low Vision Assessment

Introduction

A Low Vision Assessment (LVA) determines how you can make use of your remaining vision. An Optometrist carries out the assessment at a hospital eye clinic. The Optometrist will measure your useful vision and identify potential optical aids.

Ophthalmologist (Eye Doctor)

If the Ophthalmologist finds that your vision can't be improved by glasses and contact lenses, or medical or surgical treatment, you may be referred to a Low Vision Clinic.

You may also be referred by your optician directly into the Low Vision Clinic.

At the Low Vision Clinic

The Optometrist will measure your functional vision for both close up and distance tasks. They will use eye charts and reading materials similar to the charts used in standard eye tests.

They will identify potential optical aids that may help with everyday tasks such as reading and writing.

They can advise you about managing at home and getting out and about.

They will also assess you to see if you are eligible to be registered as sight impaired or severely sight impaired.

How to Access a Low Vision Assessment?

If you are an existing Eye Unit patient, you can request a Low Vision Assessment through the Eye Unit.

Page 2 of 4

Alternatively, you can ask your General Practitioner (GP) or High Street Optician to refer you into the Eye Unit for a Low Vision Assessment.

What should I do if I notice a change in my sight?

Visit your optician or GP if you're concerned about any aspect of your vision at any time.

Having an eye test won't just tell you if you need new glasses or a change of prescription it is also an important eye health check.

This check can often pick up the first signs of an eye condition before you notice any changes in your vision. This can lead to you getting vital treatment at the right time, which could save your sight.

If they find a problem, you'll be referred to hospital to see an ophthalmologist (eye doctor).

What should I do in an emergency?

You should go to a hospital Accident and Emergency Department as soon as possible if you:

- Have a sudden serious change in your vision
- Lose all or part of your vision in one eye or both eyes
- Have an accident involving your eyes
- Suddenly start seeing flashing lights or floaters in your vision.

What to do next?

Book an eye test with your Optician, if you are concerned about any aspect of your vision at any time.
